

Intermodal Hybrid: West Coast, A Better Way

- Synopsis:** Increased costs and truck capacity constraints have forced customers to look for alternatives in shipping freight to meet the demands of their clients.
- Challenge:** It is becoming more challenging to locate truck availability with an increased capacity in transporting products to the west coast of the United States and Canada, at a reasonable and consistent rate. With less capacity, transit times are now longer. Now, due to the ELD Mandate, driver hours are highly regulated further increasing shipping times.
- Solution:** Vision Transportation offers a unique solution to the west coast, that combines the optimal performance of over-the-road transportation with the economics of rail. By combining both, Vision can reduce shipping costs while providing high-level service and exceeding customer expectations.
- Vision:** By utilizing our unique Intermodal Hybrid shipping solutions, our customers are able to ship freight in a comparable timeframe to that of the speed of a truck, with the cost savings of rail. Vision Transportation understands that every company is unique and will tailor a solution to fit your diverse transportation needs.

Integrate your current offering with our Intermodal Hybrid solution, and transport freight where it needs to go, all at the same speed but less cost.
